

Family AIDS Care and Education Services (FACES)

Background

Family AIDS Care and Education Services (FACES) works in concert with Kenya Ministry of Health (MOH) and global efforts to attain UNAIDS' 90-90-90 targets by 2020. FACES supports over 70 health facilities in Kisumu County, Kenya and works to increase HIV status knowledge; ensure people living with HIV are linked to care; prevent new infections; deliver and capacity build for sustainable high quality care and treatment; and achieve viral load suppression to improve health outcomes.

Core Clinical Service Areas:

- HIV Testing & Counseling
- Prevention of Mother-to-Child-Transmission (PMTCT)
- Voluntary Medical Male Circumcision (VMMC)
- HIV/TB Care & Treatment

Accomplishments (Oct 2016 – Sep 2017)

HIV Care Cascade

594,362 people tested for HIV, including 187,374 children

6,687 (1.1%) people tested diagnosed with HIV, including 384 children

5,838 (87%) people diagnosed with HIV initiated on ART, including 449 children

44,523 people living with HIV currently on life-saving ART, including 3,735 children

87% of people on ART have suppressed viral loads. *Note: based on prior year's cohort*

PMTCT

14,253 pregnant mothers tested for HIV

2,316 (16%) pregnant women test diagnosed HIV

2,279 (98%) pregnant women diagnosed with HIV started on ART

2,287 (99%) HIV-exposed infants received prophylaxis to prevent HIV infection

3,069 HIV-exposed infants tested for HIV via PCR

VMMC

46,545 men underwent VMMC to help prevent HIV infection

FACES is a collaboration between the University of California San Francisco (UCSF) and Kenya Medical Research Institute (KEMRI) and is funded through a cooperative agreement with the U.S. Centers for Disease Control and Prevention (CDC)/U.S. President's Emergency Program for AIDS Relief (PEPFAR).
